

“Unleashing Each Student’s Potential”

Agnor-Hurt Elementary School Home of the Alligators

Building 21st Century Citizens

Agnor-Hurt provides a safe and trusting learning environment that embraces diversity and different cultures. We are committed to empowering students to be creative lifelong learners and productive global citizens through relationships, compassion, and perseverance. As 21st century learners, students will develop into individuals who can adapt, create, collaborate, succeed, and meet the challenges of a constantly evolving world.

Principal Michele Del Gallo Castner

School Highlights

A core belief of the Agnor-Hurt instructional program is that the foundations of reading and mathematical thinking support lifelong learning and 21st century citizenship. Students in the school are challenged on a daily basis to develop the skills they need to solve new and increasingly complex problems and to develop the skills they need to read and write with meaningful purpose across their entire curriculum. A hallmark of the school's innovative work in this area can be seen in the commitment to a multi-age instructional program. The multi-age program continues to expand in the school and allows for rich student and teacher experiences through team taught, interdisciplinary classes of students from multiple grade levels. This instructional methodology allows for a high degree of personalization of instruction, developing experiences for their students based on individual academic needs instead of simply relying in their age or grade level.

The school also takes great pride in embracing diversity and the rich and varied cultural backgrounds that students and community members bring to the school. A

goal for all students is that they become empowered, lifelong, global learners. This is seen in the classroom through the school's International Portal, a program unique to Agnor-Hurt. The portal provides teachers with a video uplink system so that they can partner with other schools across the globe to learn about other cultures and build strong relationships that will last a lifetime. All students experience this enriching program multiple times each year.

The school is also focused on having students serve their local community by using project-based learning to solve community problems such as childhood hunger. Students in grade K-5 are developing unique and innovative ways to give back to their surrounding community through this program.
